

# Construction Materials North Hampton, NH

Soils Suitable for the Extraction of  
Roadfill, Sand, Gravel or Topsoil

- Suitable for 3 of 4 Types
- Suitable for 2 of 4 Types
- Suitable for 1 of 4 Types

- Shoreline
- Town Boundary
- Pipe
- Railroad
- Interstate Highway
- Primary Road
- Secondary Road
- Other Road
- Water

Construction materials are based on the soils mapping done by the Natural Resources Conservation Service, in the Soil Survey of Rockingham County, New Hampshire, October, 1994. Mapping scale was 1:20,000. Soils data is as archived in the GRANIT database, 1993.

Construction materials classification is taken from the Soil Survey of Rockingham County, Part 2, Table 12. Each soil unit is characterized for its suitability as roadfill, sand, gravel or topsoil. Only the most favorable classifications were used to display on this map.

Base data (town boundaries, hydrography, roads, railroads and utility lines) are taken from the USGS Digital Line Graph data, 1:24,000, as archived in the GRANIT database at Complex Systems Research Center, Institute for the study of Earth, Oceans and Space, University of New Hampshire, Durham, NH.

Digital data in NH GRANIT represent the efforts of the contributing agencies to record information from the cited source materials. Complex Systems Research Center (CSRC), under contract to the Office of State Planning (OSP), and in consultation with cooperating agencies, maintains a continuing program to identify and correct errors in these data. Neither OSP nor CSRC make any claim as to the validity or reliability or to any implied uses of these data.

These maps were funded in part by a grant from the Office of State Planning, New Hampshire Coastal Program, as authorized by the National Oceanic and Atmospheric Administration (NOAA)
